And after ten years of wandering and wondering in the heart of it, rejoicing in its glorious floods of light, the white beams of the morning streaming through the passes, the noonday radiance on the crystal rocks, the flush of the alpenglow, and the irised spray of countless waterfalls, it still seems above all others the Range of Light.

John Muir, writing about California’s Sierra Nevada mountain range
Range of Light

Our newest set of flower essences is called the Range of Light. Our name takes its inspiration from John Muir, founder of the Sierra Club, who championed the Sierra Nevada as both a naturalist and organizer. Muir declared: “Well may the Sierra be named, not the Snowy Range, but the Range of Light.”

The Range of Light refers to the alpine mountain peaks where many of the flowers in this new collection flourish. It also invokes a more encompassing signature of a unique bio-region shaped and influenced by the elemental qualities of sun, water, air and earth flowing from their source in the Sierra Nevada Mountains, to create verdant woodlands, oak savannahs, fertile river valleys, stunning coastal regions and pristine desert habitats.

Thus, the Range of Light Kit consists of 48 of our most promising research essences, prepared throughout the entire bio-region of the Sierras, including Terra Flora, our garden in the Sierra foothills dedicated to the synthesis of human and elemental co-working.

The flower essences in the Range of Light have been the subject of field study and practitioner reports for over 15 years. As you will note in reading the accompanying information, these flower essences represent another octave in the healing themes that have long been the hallmark of FES flower essence therapy. These new essences are playing an important healing role throughout the world. It is now time to make them available to a larger public, even as we continue our important research.

We wish to thank many practitioners throughout the world for their case reports. In particular we would like to acknowledge the seminal research of Dr. Claudia Stern in her book, Lo Que Las Nuevas Esencias Florales De California Pueden Hacer Por Ti.
“No evangel among the mountain plants speaks Nature’s love more plainly than the Cassiope. Where she dwells, the redemption of the coldest solitude is complete. The very rocks and glaciers seem to feel her presence, and become imbued with her own fountain of sweetness. ...I strode on exhilarated, as if never more to feel fatigue, limbs moving of themselves, every sense unfolding like the thawing flowers, to take part in the new day harmony.”

— John Muir

All the world lies warm in one heart, yet the Sierra seems to get more light than other mountains.

— John Muir
Sierra Primrose grows among the granite boulders of the High Sierra, just after the snow melt.

Thus the snow flows fast or slow in grand beauty-making glaciers and avalanches; the air in majestic floods carrying minerals, plant leaves, seeds, spores, with streams of music and fragrance; water streams carrying rocks. — John Muir
If my soul could get away ... my first journeys would be into the inner substance of flowers. — John Muir
